THIS PART OF THE TUTORIAL IS GRENADES CHEAT

Most of this bit is reading so you can understand what I am doing and how the code below works.

Grenades offset from search tool
0x433D6AC8

Breakpoints from visual studio

Breakpoint 1 will be hit if you have 1 grenade
8221EC40 917D0018 stw r11,18h(r29)

Breakpoint 2 Will be hit if you have more than 1 grenade
8221EC5C 917D0018 stw r11,18h(r29)

Grenades from load Address to store Address took from visual studio

```
8221EC2C 817D0018   lwz r11,18h(r29)   load grenades value into r11
8221EC30 356BFFFF   addic. r11,r11,-1   grenades value minus 1
8221EC34 4181001C   bgt 8221EC50   branch to Pink if greater than 1
8221EC38 39600000   li r11,0   load r11 with 0,  Eg set grenades at 0
8221EC3C 38600001   li r3,1   load r3 with 1 don't need to know this bit
8221EC40 917D0018   stw r11,18h(r29)   store grenades with a value of 0, Eg if you have ran out
8221EC44 382100A0   addi r1,r1,160   don't need to know this bit
8221EC48 CBE1FFC0   lfd fr31,-40h(r1)   don't need to know this bit
8221EC4C 48248D94   b 824679E0   don't need to know this bit
Pink
8221EC50 2F0B0006   cmpwi cr6,r11,6   compares grenades value with 6
8221EC54 41980008   blt cr6,8221EC5C   branch to Yellow if grenades value is less than 6
8221EC58 39600006   li r11,6   load grenades value with 6, will only be hit if grenades value is more than 6
Yellow
8221EC5C 917D0018   stw r11,18h(r29)   store grenades if you have more than 1
```

As you can see this code has two breakpoints,

if you only have 1 grenade and you throw it, the first breakpoint will be hit.

if you have 2 or more grenades and you throw one, the Second breakpoint will be hit.

So in this case I am going to make 2 modifications to the code.

The first modification will be

8221EC38 39600000 li r11,0 Original

to

8221EC38 39600006 li r11,6 Modified

now instead of the code giving you 0 grenades it will give 6 grenades.

8221EC38 39600006 li r11,6 load r11 with 6, Eg set grenades at 6
8221EC3C 38600001 li r3,1 load r3 with 1 don't need to know this bit
8221EC40 917D0018 stw r11,18h(r29) store grenades with a value of 0, Eg if you have ran out

The Second modification will be

8221EC54 41980008 blt cr6,8221EC5C Original

to

8221EC54 41980004 blt cr6,8221EC58 Modified

now instead of branching to Yellow it will branch to Green and r11 will be loaded with 6

8221EC54 41980004 blt cr6,8221EC58 branch to **Green** if grenades value is less than 6
Green
8221EC58 39600006 li r11,6 load grenades value with 6
Yellow where it used to branch to
8221EC5C 917D0018 stw r11,18h(r29) store grenades if you have more than 1

that is the explaining done we have our mods, all we have to do is add the cheat into the engine, then build and test.

press play or un-pause the video to carry on with the rest of this tutorial, Eg adding the cheats to the engine.
